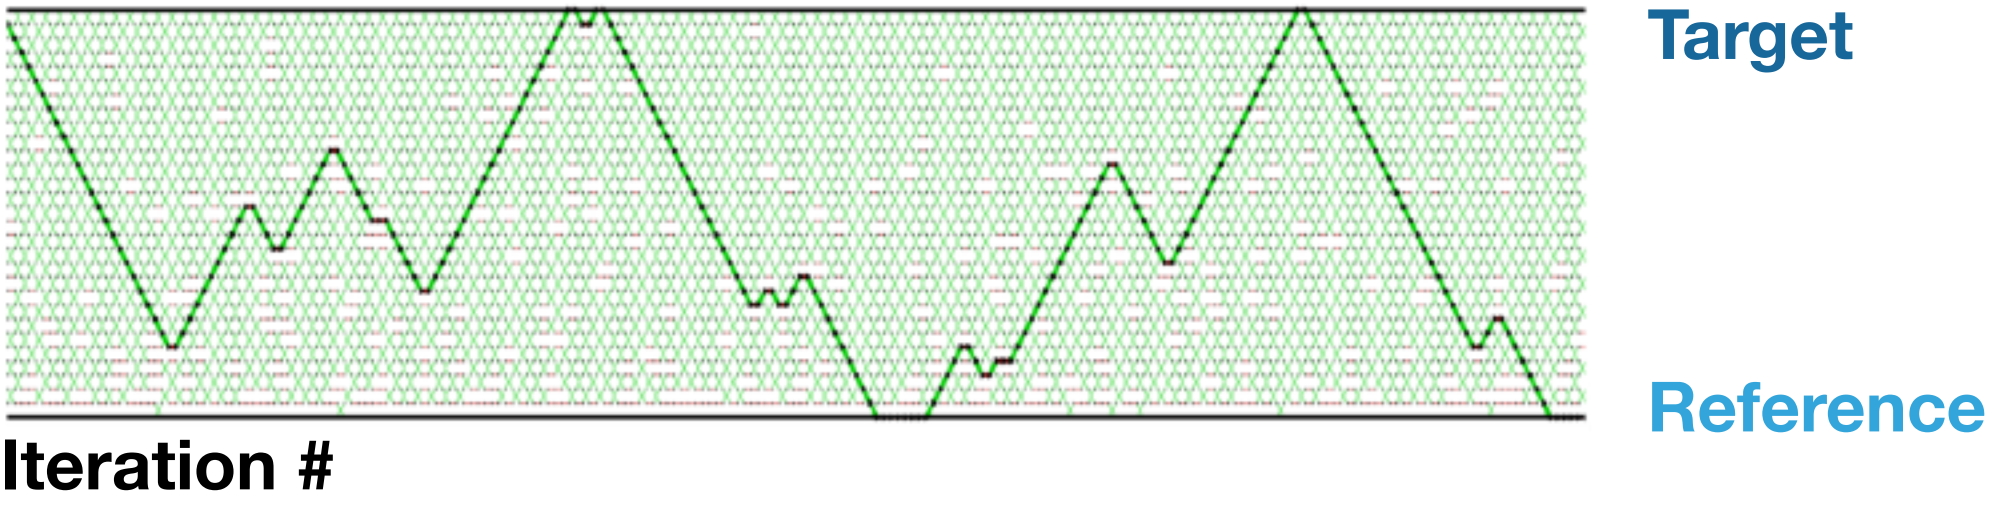
20

- **Round trip rate** % of iterations with round trip

$$\tau_N = \lim_{t \to \infty} \frac{\mathbb{E}[\text{total round trips by time t}]}{t}$$

- Total round-trip and restarts differ by at most N and hence are equivalent to study

- **Round Trip:** when a I_t^m travels from 0 to N and back to 0



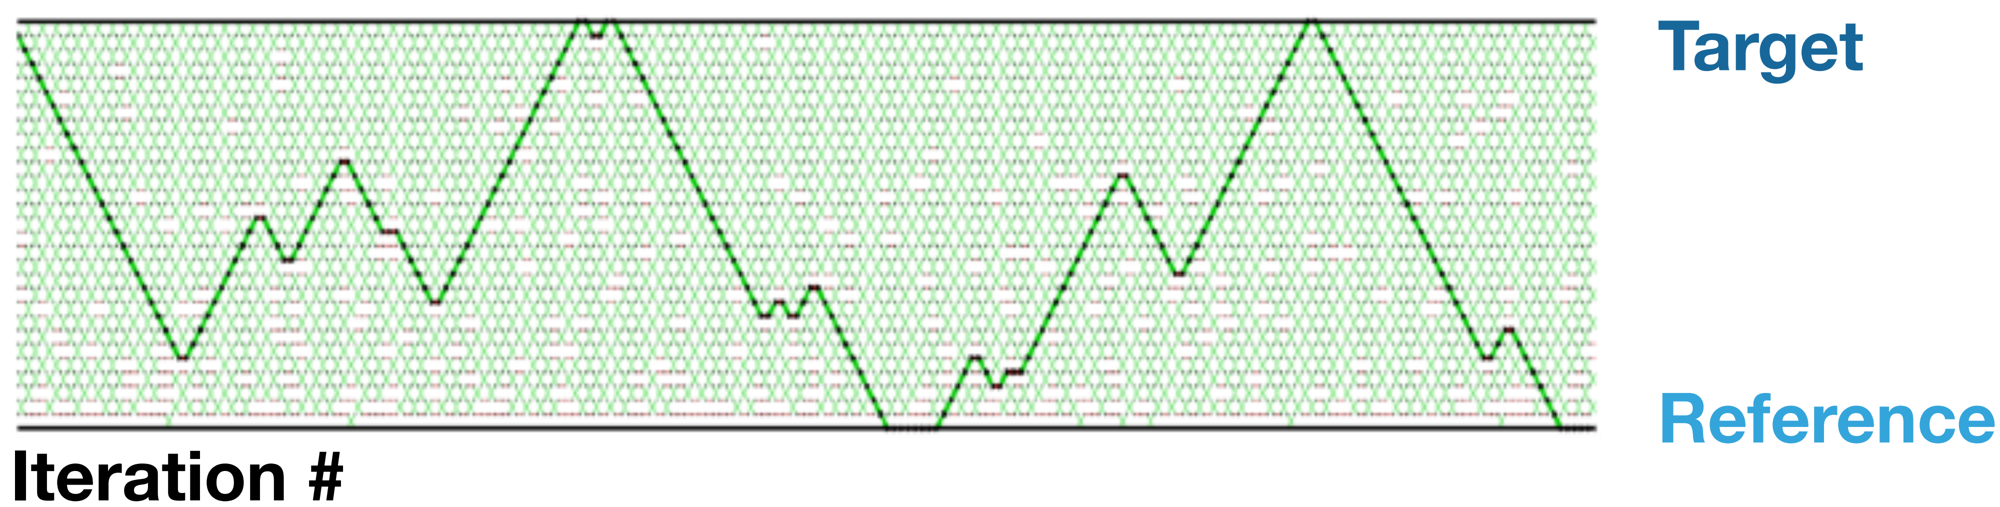
- We can study the communication through index processes I_t^m

- **Restart:** When I_t^m travels from 0 to N, reference and target have communicated on machine m

OBJECTIVE OF PT

OBJECTIVE OF PT

- We can study the communication through index processes I_t^m
- **Restart:** When I_t^m travels from 0 to N, reference and target have communicated on machine m
- **Round Trip:** when a I_t^m travels from 0 to N and back to 0



- Total round-trip and restarts differ by at most N and hence are equivalent to study
- **Round trip rate** % of iterations with round trip

$$\tau_N = \lim_{t \to \infty} \frac{\mathbb{E}[\text{total round trips by time t}]}{t}$$
