NON-REVERSIBLE PT (OKABE ET AL, 2001)

$$\mathbf{K}_{\mathrm{comm},t} = \mathbf{K}_{\mathrm{even}} 1(t \equiv 0 \mod 2) + \mathbf{K}_{\mathrm{odd}} 1(t \equiv 1 \mod 2)$$

$$= \prod_{n \equiv t \mod 2} \mathbf{K}^{(n,n+1)}$$

- Non-reversible PT trajectories have momentum!

- If swap for machine m is accepted

$$\epsilon_{t+1}^{m} = \epsilon_{t}^{m}$$

- Otherwise

$$\epsilon_{t+1}^{m} = -\,\epsilon_{t}^{m}$$

NON-REVERSIBLE PT (OKABE ET AL, 2001)

- Deterministically alternate between **Odd** and **Even** swaps

$$\mathbf{K}_{\text{comm},t} = \mathbf{K}_{\text{even}} 1(t \equiv 0 \mod 2) + \mathbf{K}_{\text{odd}} 1(t \equiv 1 \mod 2)$$

$$= \prod_{n \equiv t \mod 2} \mathbf{K}^{(n,n+1)}$$

- Non-reversible PT trajectories have momentum!
  - If swap for machine m is accepted

$$\epsilon^m_{t+1} = \epsilon^m_t$$

  - Otherwise

$$\epsilon^m_{t+1} = -\epsilon^m_t$$
