

STATISTICAL MECHANICS

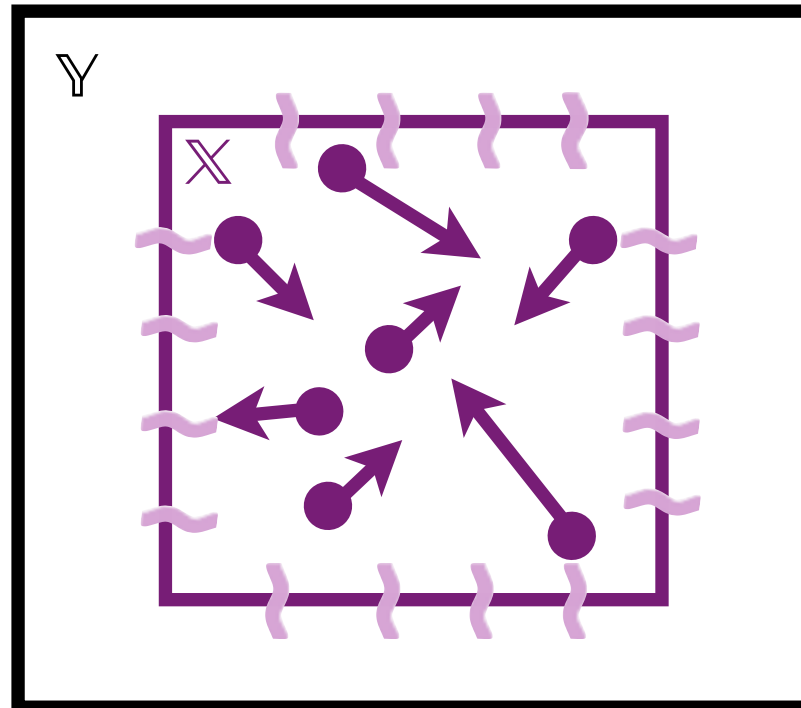

▶ E.g. suppose the box is in a very hot room

► We can't observe the reservoir states $y \in Y$, but can measure the energy added or taken away X

► What is the law π of the system $x \in X$ after the system reaches equilibrium?

$$\pi(x) = \eta(x | y)$$

- Suppose that the system now interacts with a reservoir in a state $y \in \mathbb{Y}$

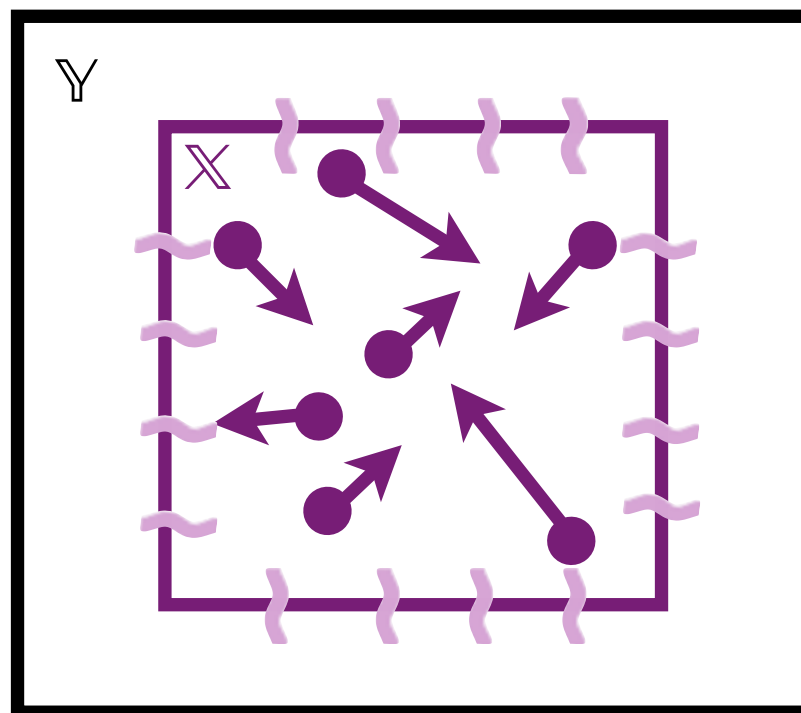

E.g. a substance after a chemical reaction
