

Algorithmic: Single chain tries to simultaneously efficiently explore & accurately

Hardware: Clocks are stagnant, and memory computation is distributed

- ▶ **Solution:** Build an interacting particle system
 - ▶ Delegate exploration to tractable **reference** chain
 - ▶ Communicate to **target** through the **interpolating distributions**

Intractable Target

**Interpolating
Distributions**

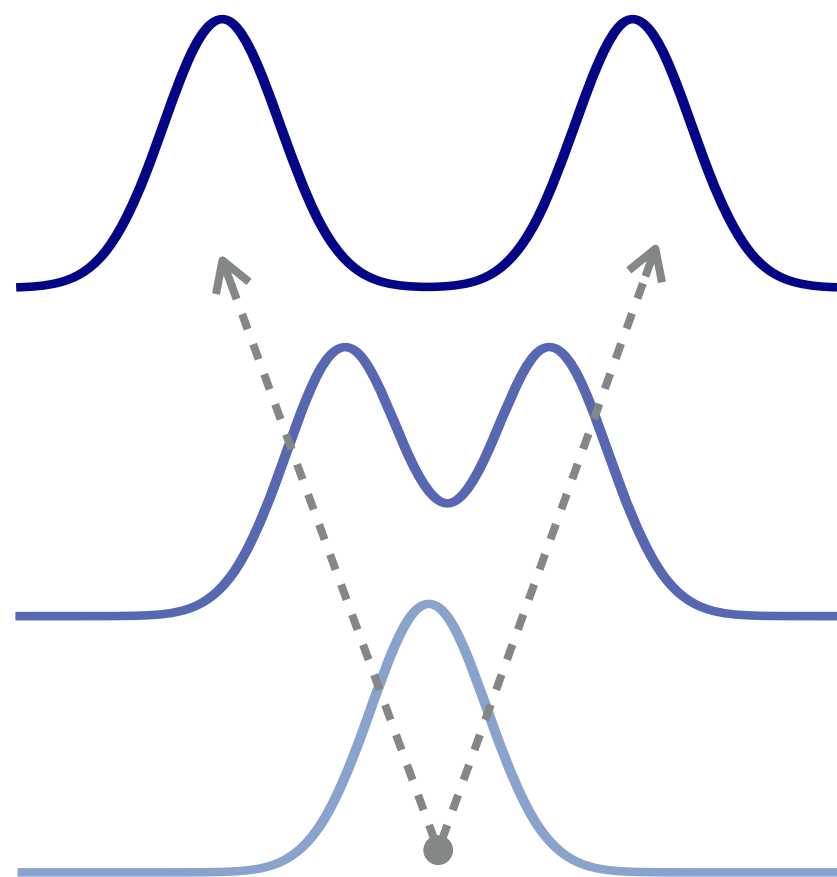

Tractable Reference

PROBLEMS WITH SERIAL MCMC

PROBLEMS WITH SERIAL MCMC

- ▶ **Hardware:** Clock speeds are stagnant, and modern computation is distributed
- ▶ **Algorithmic:** Single chain tries to simultaneously efficiently explore & be accurate
- ▶ **Solution:** Build an interacting particle system
 - ▶ Delegate exploration to tractable **reference** chain
 - ▶ Communicate to **target** through the **interpolating distributions**

Intractable Target

**Interpolating
Distributions**

Tractable Reference

ANNEALING ALGORITHMS

- ▶ Annealing is **not** an algorithm but a platform to build algorithms on top of
