SCALING LIMIT (NON-REVERSIBLE)

- **Theorem:** Scaling the index by N and time by N , the scaled index process for NRRPT converge to piecewise deterministic Markov process depending on the annealing path through Λ

Fundamentally different behavior are due to reversible PT

► As N increases, NRRPT stabilizes.

$$\Lambda = 1$$

$$\Lambda = 10$$

► Asymptotic behaviour of NRPT depends on the annealing path through Δ

SCALING LIMIT (NON-REVERSIBLE)

- **Theorem:** Scaling the index by N and time by N , the scaled index process for NRPT converge to piecewise deterministic Markov process depending on the annealing path through Λ

- Fundamentally different behaviour compared to **reversible PT**
- As N increases, NRPT stabilizes.
- Asymptotic behaviour of NRPT depends on the annealing path through Λ
