

# RECALL STABILISED MCMC

- ▶ Referenced stabilised MCMC is **stable** when reference is close to target
  - ▶ Acceptance rate is stable
- ▶ Referenced stabilised MCMC is **fragile** when the reference share little support with target
  - ▶ Most proposed reference samples are rejected

# RECALL STABILISED MCMC

- ▶ Referenced stabilised MCMC is **stable** when reference is close to target
  - ▶ Acceptance rate is stable
- ▶ Referenced stabilised MCMC is **fragile** when the reference share little support with target
  - ▶ Most proposed reference samples are rejected
- ▶ Introduce multiple interpolating distributions with enough overlap to maintain stability
